FOR IMMEDIATE RELEASE

Hadronex Selected by The Artemis Project™ as a 2011 Top 50 Water Company

The Artemis Project Top 50 Unveils 2011's Most Innovative Water Technologies

Escondido, CA (May 17, 2011) - Hadronex today announced that it has been chosen by The Artemis Project™ as a Top 50 Water Companies Competition winner.

"The Artemis Top 50 is the water industry's benchmark for recognizing innovation that will matter. It identifies the entrepreneurs that are applying technology to meet the world's water challenges," noted Laura Shenkar, principal at The Artemis Project. "Water tech is quickly becoming an engine for economic development and job growth. With these awards, we strive to identify the companies offering the most promising technologies coming onto the market."

Dr. Greg Quist, co-founder and President of Hadronex is attending the Ontario H2O Global Water Leadership Summit and accepted the award on behalf of Hadronex. "Since David Drake and I founded Hadronex in 2005, our SmartCover® product has helped our customers around the country prevent more than 2,700 sanitation sewer overflows. These overflows cost utilities through fines and litigation and cause sickness to more than 3.5 million people annually in the US," remarked Dr. Quist. "The SmartCover® is a very effective tool for sanitation agencies to help them manage their resources, lower operating costs, and most importantly keep the water and environment clean. This award is an international recognition of our growth and success."

The SmartCover® was introduced by Hadronex, Inc. in early 2006. The small, self contained unit fits easily underneath any manhole cover and provides real time monitoring of the water level with wireless alarm notification. Using a global LEO satellite system, SmartCover® sends alarms to agencies of potential sewer spills by providing early notification of rising water. SmartCover® also supports Hadronex' Sewer Intelligence® option which is used for sewer system optimization. SmartCover® is deployed by water and agencies across the United States and Internationally. SmartCover® has won several awards from the water industry as well as cities and high tech organizations.

About Hadronex, Inc.

Hadronex is an environmental company that manufactures products for the Water and Wastewater industry. The Hadronex SmartCover® has become the industry standard for water level monitoring to prevent sanitary sewer overflows. Hadronex is located in Escondido, California and has Dealers and Representatives across the U.S.
